SUMMARY

Data Engineer specialising in the Azure ecosystem and PySpark ETL. Leveraging a software engineering background in Python, SQL, and backend development to deliver scalable, cloud-based data solutions. Experienced in implementing Medallion Architecture (Bronze-Silver-Gold) and incremental data processing using Databricks and Delta Lake. Recently designed robust data pipelines that increased data accuracy and reporting consistency by 25%

TECHNICAL SKILLS

Cloud: Azure (Databricks, Data Factory, Synapse, ADLS Gen2) | Bronze-Silver-Gold Data Modelling | Delta Lake.

Data Engineering: PySpark | Spark SQL | Python | SQL | ETL/ELT Pipeline Orchestration | Data Validation.

Analytics & Development: PostgreSQL / MySQL | Django REST Framework | Git/GitHub.

DATA ENGINEERING PROJECTS

Alibaba Stock Market – Azure Data Pipeline *February 2026 – April 2026*

[Link: https://github.com/saiteja2600/Alibaba-Stocks-Analytics.git](https://github.com/saiteja2600/Alibaba-Stocks-Analytics.git)

- **Real-Time Data Ingestion:** Architected a highly scalable streaming pipeline using **Kafka** to ingest high-throughput stock market JSON events, utilising offset-based consumption for reliable, near real-time data delivery.
- **Medallion Architecture Implementation:** Designed a robust Bronze-Silver-Gold data pipeline in **Databricks** using **PySpark**, enforcing strict data validation rules that **increased overall data accuracy and reporting consistency by 25%**.
- **Idempotent & Incremental Processing:** Engineered robust Upsert (Merge) logic using natural keys (StockID, Date) to guarantee idempotent processing, **eliminating 100% of duplicate records** during pipeline re-runs or upstream data corrections.
- **Versioned Storage & Auditability:** Implemented a version-controlled storage strategy (**V-YYYYMMDDHHMMSS**) across all data layers, enabling full historical reproducibility, isolated debugging, and seamless rollback capabilities.
- **Orchestration & Analytics Delivery:** Orchestrated the end-to-end scheduled workflow via **Azure Data Factory**, loading analytics-ready data into **Azure SQL** for leadership reporting in **Power BI**, and configured Logic Apps and Azure Monitor for automated pipeline alerting.

Environment: Azure Databricks, PySpark, Kafka, Azure Data Factory (ADF), Azure SQL, Power BI, Logic Apps, Azure Monitor.

Sales Analytics Data Platform *December 2025 – February 2026*

[Link: https://github.com/saiteja2600/Sales-Analytics-Platform.git](https://github.com/saiteja2600/Sales-Analytics-Platform.git)

- **Pipeline Orchestration:** Architected an automated ETL pipeline using **Azure Data Factory** to ingest and centralise scattered sales data from multiple source systems into a single source of truth.
- **Data Transformation:** Processed raw sales records using **PySpark Notebooks** and **Azure SQL** scripts, standardising core business dimensions (Agent, Sector, Location) and sales metrics (Revenue, Deal Stage) for downstream consumption.
- **Security & Automation:** Configured pipeline triggers for automated data refreshes and implemented **Azure Managed Identities** across Integration Runtimes and Linked Services to ensure secure, credential-less data access.
- **Analytics Serving:** Designed the backend data architecture to power a centralised enterprise reporting layer, enabling business stakeholders to accurately track regional performance, key accounts, and a 63% overall win rate.

Environment: Azure Databricks, PySpark, Azure Data Factory (ADF), Azure SQL, Power BI, Logic Apps, Azure Monitor.

PROFESSIONAL EXPERIENCE

Software Engineer | **Lab Iconics**, Hyderabad | *June 2024 – May 2025*

- Developed and customised LIMS & ELN modules supporting complete laboratory workflows and sample lifecycle management.
- Architected a reconciliation engine to handle 10k+ monthly records, ensuring 100% data integrity for critical lab operations.
- Enhanced ELN data capture and retrieval processes, reducing response time across core modules by ~20%.
- Managed SQL/PostgreSQL backends for large-scale lab data.
- Collaborated with QA, lab operations, and stakeholders to resolve production issues and deliver stable enterprise solutions.

Python Full Stack Developer Intern | **Ramana Soft**, Hyderabad | *November 2023 – March 2024*

- Built and deployed Django-based applications with CRUD functionality, REST APIs, and PostgreSQL/MySQL backends.
- Optimised database models and SQL queries, improving performance and retrieval efficiency by ~20%.
- Developed authentication, role-based access, search/filtering features, and Django Admin dashboards.

EDUCATION & CERTIFICATIONS

- **M.Sc. Data Science:** GITAM University, Visakhapatnam, *Apr 2023*
- **B.Sc. Computer Science:** ABN & PRR College of Science, *Oct 2020*
- **Certification:** Explore Core Data Concepts in Microsoft Azure (Coursera)
- **Certification:** Introduction to Databases (Coursera)

ACHIEVEMENTS

- Delivered a technical presentation on Chatbot Technology to a 20-member cross-functional team at Lab Iconics.
